As of today there is no November Sentinel. So, I have included a link to the USAF Safety Center. There is a lot of good information on this page to build a safety briefing.

Other things that you may want to bring up to your members are

- Fireplace safety
 - chimney/flues should be inspected every year, even when using gas
 - embers screens to limit the possibility of hot embers popping out and starting a fire
- carbon monoxide detectors - wood stoves or other heating devices the create
- Fire pit safety - fire pits and screen are very hot - watch children
- vehicle carbon monoxide dangers - if there is an exhaust leak in the vehicle, these is a real danger with the increased use of vehicle heaters during the winter. Make sure carbon monoxide detection devices are in-date and functional.
- holiday travel safety - WEAR SEAT BELTS, DO NOT DRIVE TIRED
- cold weather dangers - hypothermia is a real danger, even in Florida.
